

Oefeningen niveau 1**Oefening 1.** Bereken de afgeleide van volgende veeltermen

1. $\frac{d}{dx}(1) = \dots\dots$

4. $\frac{d}{dx}(x^3) = \dots\dots$

2. $\frac{d}{dx}(x) = \dots\dots$

5. $\frac{d}{dx}(x^4) = \dots\dots$

3. $\frac{d}{dx}(x^2) = \dots\dots$

6. $\frac{d}{dx}(x^5) = \dots\dots$

Oefening 2. Bereken de afgeleide van volgende veeltermen

1. $\frac{d}{dx}(x + 1) = \dots\dots$

5. $\frac{d}{dx}(2x + 2) = \dots\dots$

2. $\frac{d}{dx}(x + 2) = \dots\dots$

6. $\frac{d}{dx}(2x + 3) = \dots\dots$

3. $\frac{d}{dx}(x + 3) = \dots\dots$

4. $\frac{d}{dx}(2x + 1) = \dots\dots$

7. $\frac{d}{dx}(3x + 1) = \dots\dots$

Oefening 3. Bereken de afgeleide van volgende veeltermen

1. $\frac{d}{dx}(x^2 + 1) = \dots\dots$

4. $\frac{d}{dx}(x^2 + 2x) = \dots\dots$

2. $\frac{d}{dx}(x^2 + 2) = \dots\dots$

5. $\frac{d}{dx}(x^2 + x + 1) = \dots\dots$

3. $\frac{d}{dx}(x^2 + x) = \dots\dots$

6. $\frac{d}{dx}(x^2 + x + 2) = \dots\dots$

Oefening 4. Bereken de afgeleide van volgende veeltermen

1. $\frac{d}{dx}(2x^2) = \dots\dots$

4. $\frac{d}{dx}(2x^2 + x + 1) = \dots\dots$

2. $\frac{d}{dx}(2x^2 + 1) = \dots\dots$

5. $\frac{d}{dx}(2x^2 + 2x + 1) = \dots\dots$

3. $\frac{d}{dx}(2x^2 + x) = \dots\dots$

6. $\frac{d}{dx}(2x^2 + \pi x + 1) = \dots\dots$
